

Customer No. 24498
Attorney Docket No. PF040032
Office Action Date: 1/5/11

Amendments to the Specification

Please replace the paragraph on page 9, lines 21-26 of the originally filed application with the following:

The motion configuration choice circuit receives the bit-rate, resolution, spatial and temporal resolution information and the temporal decomposition ~~networks~~levels. From this information or an item of this information, it chooses, for the temporal synthesis, a motion compensation configuration. The temporal synthesis circuit adapts the interpolation filter according to this chosen configuration.
